        DATASET

        LINKED
        SERVICE

        STORAGE
```
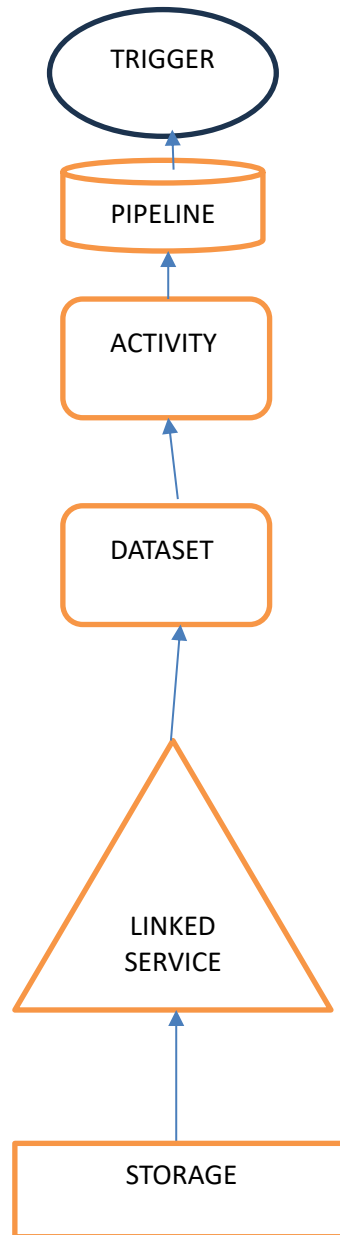

EXAMPLE 1: FOLDER DELETE FROM ADLS

[Create a folder and upload a file into the same]

Step 1
Linked service to ADLS
Manage → Linked Services

New → Azure Datalake Storage Gen 2

Name: ls_saih2208

Connect: Default

Authentication Type: System assigned Managed Identity

Azure Subscription → Storage Account name → Test → Create → Publish

Step 2
Creating Dataset
Data Hub → Integration Dataset

Azure Data lake Storage Gen2 → Format → Parquet → Continue

Name: ds_folder

Linked Service: Map the linked service created in step 1

File Path: Browse and select folder path

Ok → Import Schema : None → Ok → Publish

Step 3
Creating Pipeline
Integrate Hub → Pipeline

From left side under Activities select "**Delete**" under "**General**"

Drag the delete icon to the canvas

At the bottom provide settings

General Tab: Name: del_folder (Rest leave as default)

Source Tab: Dataset Map (Rest leave as default)

Logging: Disable

Step 4
To test click on **Debug**.
